Additional Supporting Information (Files uploaded separately)

Captions for Tables S1 to S4

Introduction

This supporting information contains the tables captions and the references included in Table S4. The four tables consists of compilation of data and include the list of currently classified of martian meteorites (as of August 2020). The supporting information tables are available in the Figshare database (<https://doi.org/10.6084/m9.figshare.13182629.v1>).

Table S1. List of martian meteorites. LREE enrichment indicated for shergottites.

Table S2. Number of meteorites per type for paired groups and unpaired meteorites

Table S3. Compilation of martian meteorite bulk rock compositions (if no data =not analyzed or below detection)

Table S4. Crystallization and ejection ages of martian meteorites (references in Tables S4) including techniques used for cosmic ray ejection ages (CRE).

Text S1. References for publications included in Table S4.
