## SEA ICE – CLOUDS INTERACTION IN THE ARCTIC

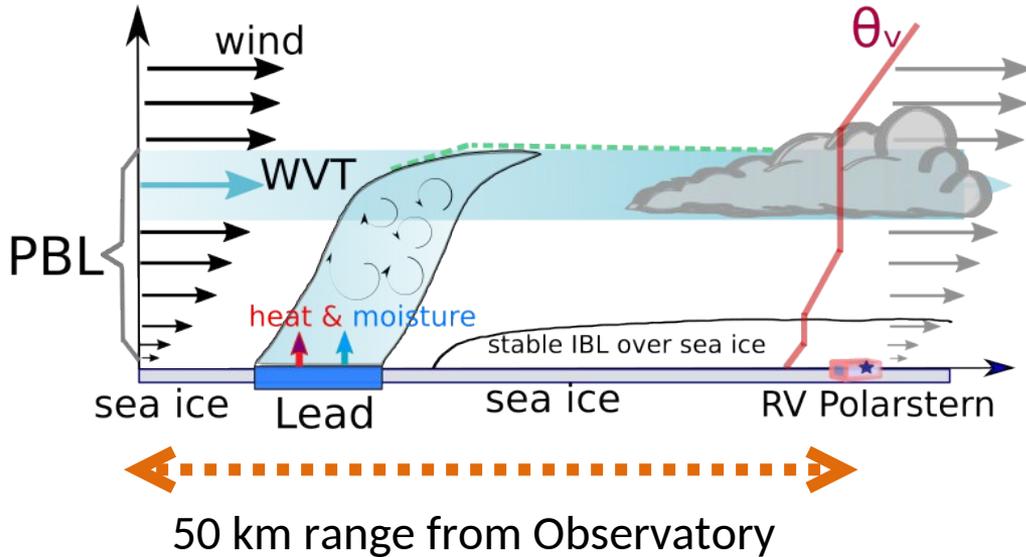

*(University of Hamburg, Germany)*

have an effect on Arctic clouds by changing their macro-, micro-physical and radiative properties.

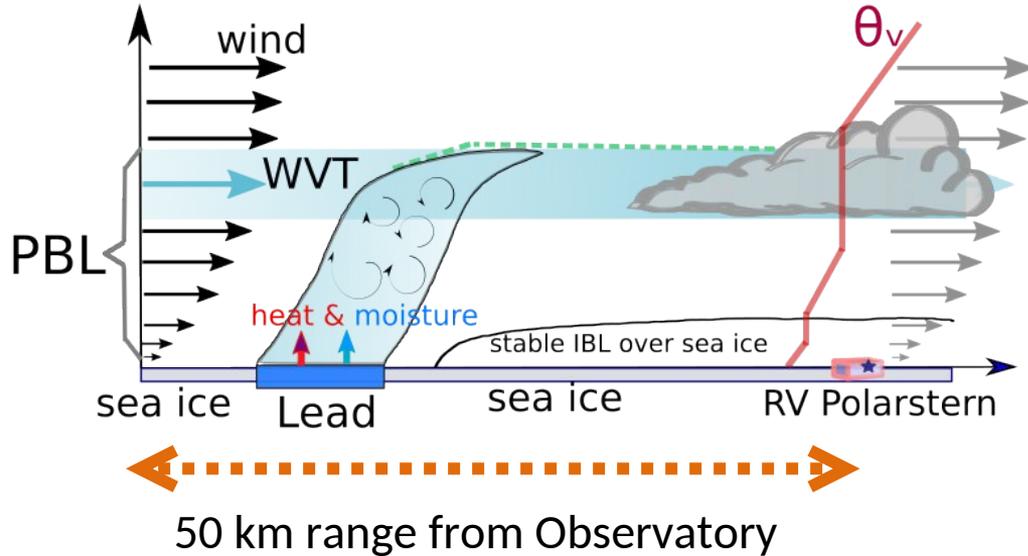

## SEA ICE – CLOUDS INTERACTION IN THE ARCTIC

- Water vapor transport (WVT) as mechanism to entangle sea ice leads with observed clouds,

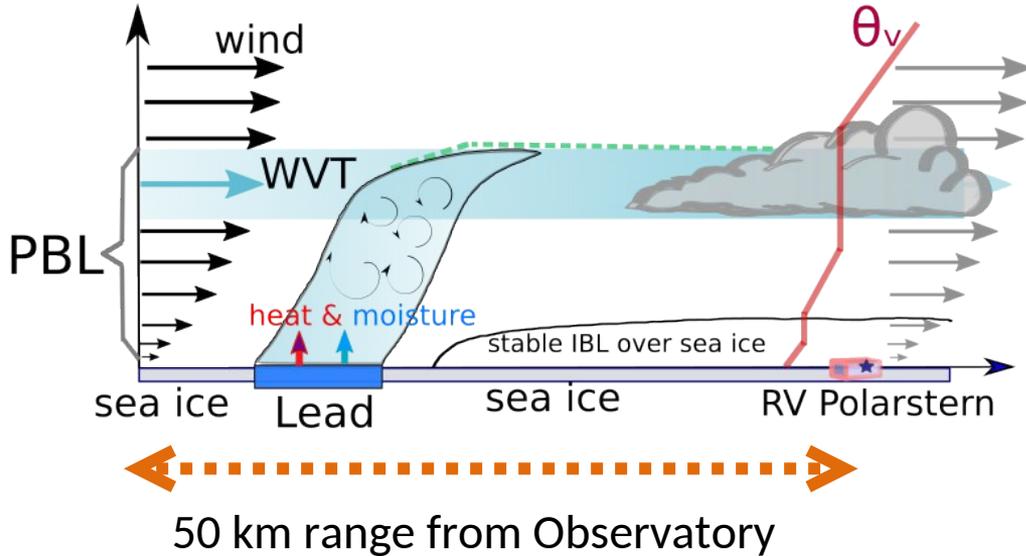

## SEA ICE – CLOUDS INTERACTION IN THE ARCTIC

- Water vapor transport (WVT) as mechanism to entangle sea ice leads with observed clouds,
- Wind direction from  $\max. \nabla_z WVT$  within the boundary layer,

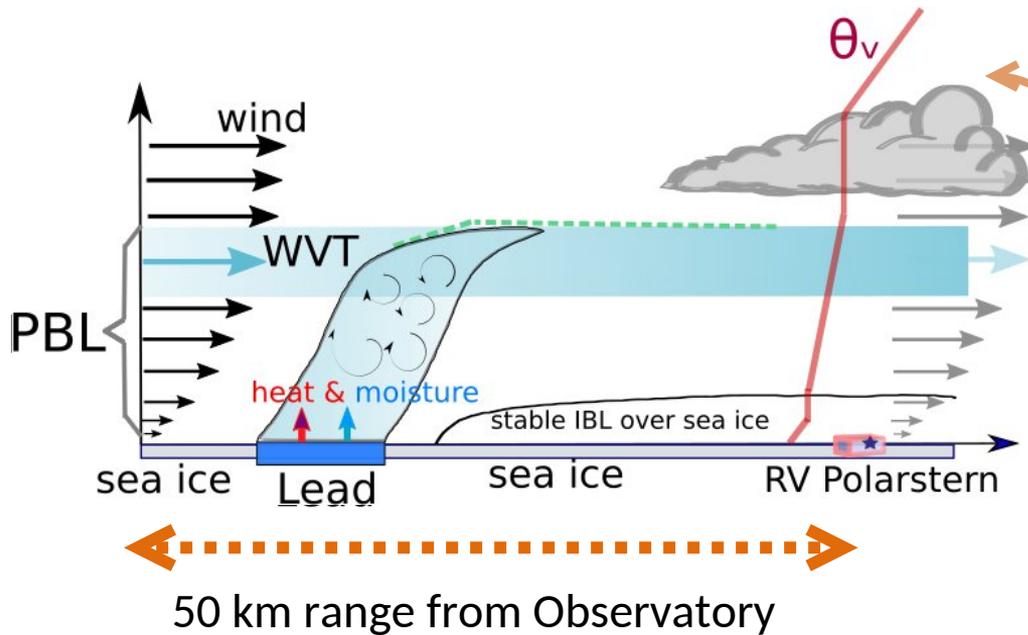

## SEA ICE – CLOUDS INTERACTION IN THE ARCTIC

- Water vapor transport (WVT) as mechanism to entangle sea ice leads with observed clouds,
- Wind direction from  $\max. \nabla_z WVT$  within the boundary layer,
- Clouds **coupled** to WVT (interaction with WVT / leads),

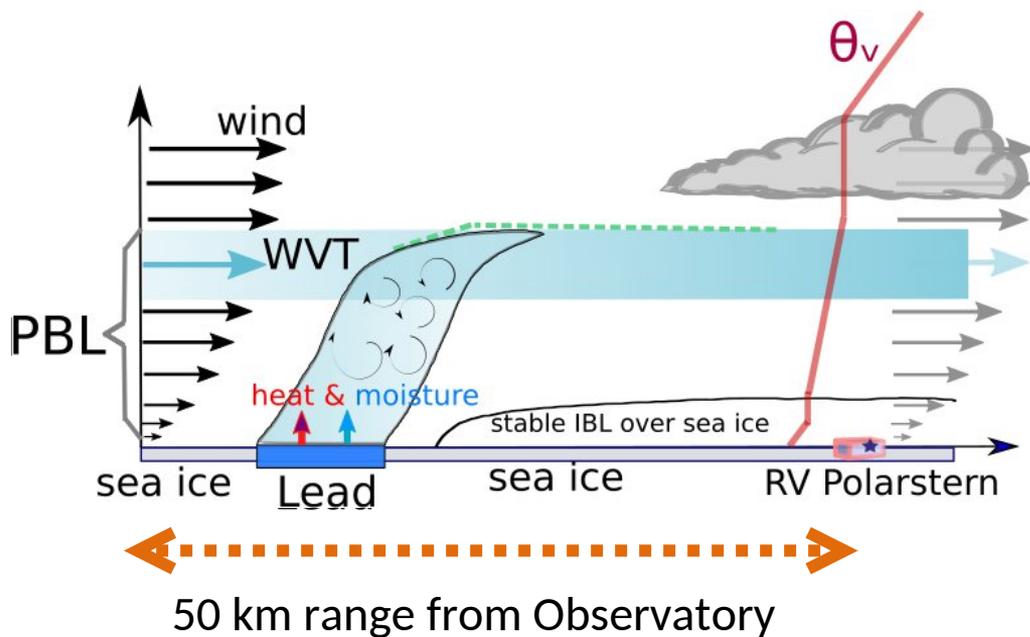

## SEA ICE – CLOUDS INTERACTION IN THE ARCTIC

- Water vapor transport (WVT) as mechanism to entangle sea ice leads with observed clouds,
- Wind direction from max.  $\nabla_z WVT$  within the boundary layer,
- Clouds **coupled** to WVT (interaction with WVT / leads),
- Clouds **decoupled** to WVT (no interaction with WVT / leads),

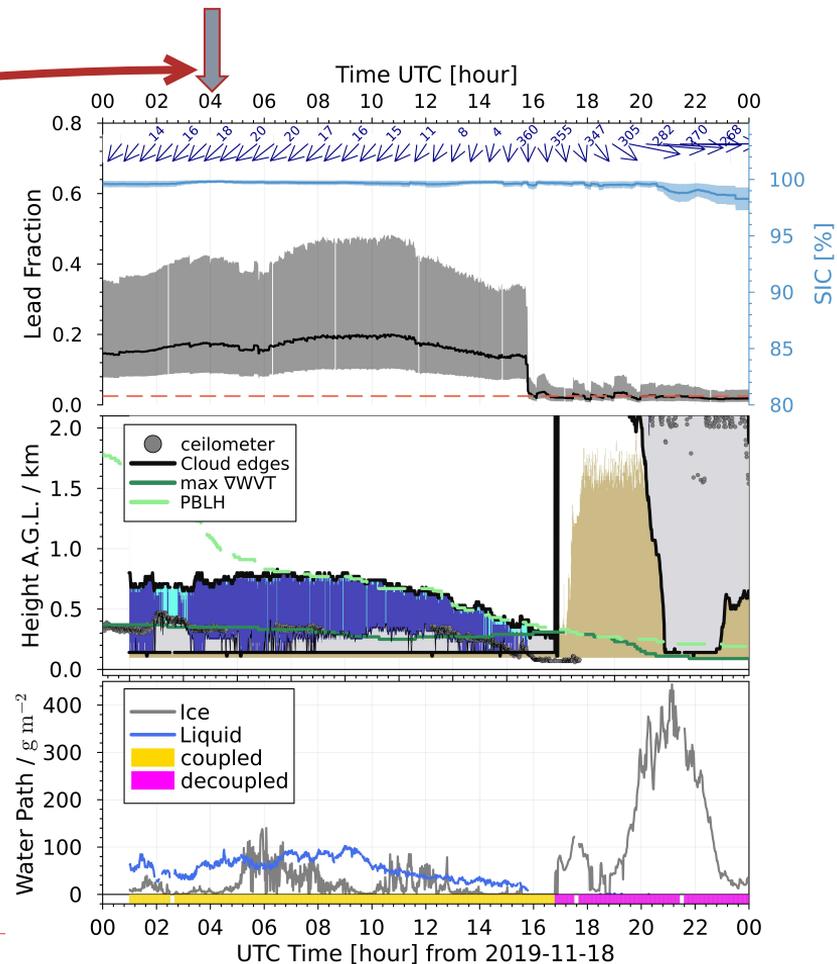

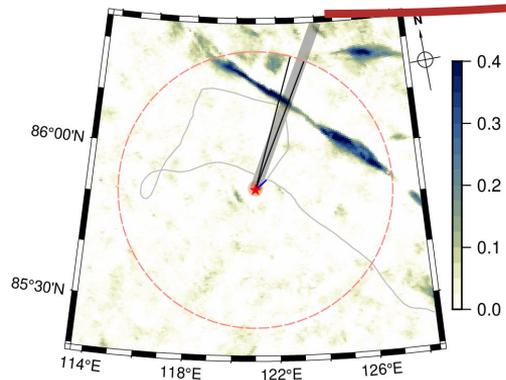

## SEA ICE – CLOUDS INTERACTION IN THE ARCTIC

- Water vapor transport (WVT) as mechanism to entangle sea ice leads with observed clouds,
- Wind direction from  $\max. \nabla_z WVT$  within the boundary layer,
- Clouds **coupled** to WVT (interaction with WVT / leads),
- Clouds **decoupled** to WVT (no interaction with WVT / leads),
- Only upwind leads are relevant,

pablo.saavedra@uni-leipzig.de 

## CONCLUSIONS

- MOSAiC findings confirmed at Utqiagvik site for 2012 to 2022:
  - enhancement of LWP with sea ice openings,
  - IWP no relationship with sea ice openings,
  - lower base height, deeper cloud layer, warmer cloud top temperature,
- wider variability for mixed-phase cloud properties during years with anomalous low sea ice during winter,
- 10 years obs. do not show **significant** trend in cloud properties.
