

22

23 **Figure 4:** responses to experimental brood parasitism at one day (top row) and three days  
 24 (bottom row) according to whether the male host (a-b) or the female host (c-d)  
 25 vicinity during simulated intrusions of heterospecifics at host nests, for each of the experimental  
 26 model groups: bulbul control (black), male diederik cuckoo (dark grey), and female diederik  
 27 cuckoo (light grey).
